

A Blank Periodic Table

You can use this to help memorize the elements!

The image shows a blank periodic table grid. It consists of several rows and columns of empty boxes. The grid is shaped like a standard periodic table, with a central block of 18 columns and 6 rows. To the left of this central block is a column of 2 boxes, and to the right is a column of 2 boxes. Above the central block, there is a single box. Below the central block, there is a row of 14 boxes. Dotted lines connect the bottom-left corner of the central block to the top-left corner of the 14-box row, indicating that this row represents the lanthanide and actinide series.
